**OBJECTIVES**

Maxillofacial Trauma

1. Describe current trends in maxillofacial injury.
2. Discuss maxillofacial injury assessment and management along with the indications and contraindications of surgery for maxillofacial injuries.
3. Identify improved outcomes from major maxillofacial trauma by dissemination of knowledge and expertise regarding the care of the injured patient.

**Case Presentation: Nursing Panel Discussion**

1. Discuss the skills and treatments commonly utilized in the care of a trauma surgical patient.
2. Describe the nurses’ role through the continuum of care during a trauma/surgical patient's hospitalization.
3. Review the knowledge gained and lessons learned to improve the quality of care provided for trauma/surgical patients.

**Air Transport versus Ground**

1. Discuss the history of air medical transport.
2. Discuss the appropriate levels of care for the safe transport of the critically ill patient.
3. Identify the criteria for medivac vs ground transport and the steps taken in preparing the patient for transport.

**Combat Medicine**

1. Discuss the echelon of care for soldiers wounded during battle.
2. Discuss the level of care provided at each echelon.
3. Identify the application for new technologies and techniques learned from the battlefield and how they are applied to civilian casualty care.

**Update on Abdominal Compartment Syndrome**

1. Identify and diagnose abdominal compartment syndrome.
2. Describe different approaches of treatment for abdominal hypertension and ACS.
3. Describe the complications of ACS and ways of treating them.

**Second Victim**

1. Identify the second victim potential in adverse events.
2. Describe the solution and process developed to resolve the problem of second victims.
3. Describe a plan for developing a support structure for providers who are second victims that will lead to accountability throughout the organization.
